Materials engineering is a field in which engineers use their knowledge of the relationship between a material's atomic or molecular structure and its properties to alter the material to get the performance needed. Materials engineers contribute their expertise in virtually all areas of technology: from the nano-sized materials found in biomedical and microelectronic applications to the large-scale composites found in aerospace applications.

Because engineered products are often limited by materials issues (such as performance and manufacturability), materials engineers play a vital role on engineering design teams, working closely with other engineers. As part of these teams, they apply their knowledge of science, engineering, and state-of-the-art analytical instruments.

The majority of our graduates find employment in the biomedical, electronic, aerospace and petroleum industries. Some work as consultants for large or small organizations. Others become executives. A significant number of materials engineers are involved in research and development. Some of our graduates are entrepreneurs who have started their own companies. Others are attorneys or physicians. Because of our broad-based, student focused curriculum, our graduates are able to excel in professions of their choosing.

Vision
To collaboratively address the grand challenges of our time, especially sustainability and transformative learning, through our materials engineering program.

Mission
To be a vibrant, creative and effectual learning community that cultivates the unique capabilities of each member of our community to thrive in a complex, interconnected, technological and ever-changing world.

Program Education Objectives
1. Holistically address complex challenges, drawing from materials engineering understanding and life experiences;
2. Live meaningful, socially-beneficial lives, enriched by their engineering education;
3. Exemplify proactive adaptive capacity throughout their lives; and
4. Communicate effectively in different contexts
MATE 215. Materials Laboratory I. 1 unit
Term Typically Offered: F,W,SP,SU
Prerequisite or concurrent: MATE 210.
Focus on processing-structure-properties relationships of materials, including crystal structures, electronic properties of materials, materials selection, phase diagrams, corrosion, mechanical properties of polymers, cold work and annealing of alloys and heat treatments of steels. 1 laboratory.

MATE 222. Materials Selection Life Cycle. 4 units
Term Typically Offered: W
Prerequisite: MATE 210.
Materials selection for sustainable product design. Use of material selection software and techniques to solve design problems with multiple objectives and constraints. Focus on Triple Bottom Line design including functionality, economic viability, and sustainability. Principles and tools for weighted property optimization, production cost modeling, and life cycle analysis introduced through project-based learning mode. 4 lectures.

MATE 225. Materials Laboratory II. 1 unit
Term Typically Offered: F
Process-structure relationships of materials. Introduction to materials characterization techniques including differential scanning calorimetry, x-ray diffraction, and metallography. Emphasis on materials engineering professional practices and written communication. 1 laboratory.

MATE 232. Materials, Ethics, and Society. 4 units
Term Typically Offered: F
Prerequisite: MATE 210.
Materials Engineering principles through the context of historical and current events. Ethics and systems thinking are integrated in the study of the impacts of materials and technology on society during the Stone Age, Bronze Age, and Iron Ages, as well as today’s world. Topics include crystallography, phase diagrams, microstructures, processing techniques, and nanotechnology. 4 lectures.

MATE 235. Materials Laboratory III. 1 unit
Term Typically Offered: W
Prerequisite: MATE 225.
Mechanical property testing by tensile tests and hardness tests. Emphasis of data interpretation and analysis with structure-property relationships of materials. Continued materials engineering professional practices. 1 laboratory.

MATE 270. Selected Topics. 1-4 units
Term Typically Offered: TBD
Prerequisite: Open to undergraduate students and consent of instructor.
Directed group study of selected topics. The Class Schedule will list topic selected. Total credit limited to 8 units. 1 to 4 lectures.

MATE 280. Introduction to Materials Thermodynamics. 4 units
Term Typically Offered: W
Prerequisite: CHEM 125, PHYS 133, MATH 143, MATE 210 and MATE 215.
Thermodynamics concepts related to materials systems and processes: systems and surroundings, laws of thermodynamics, process flowsheets, mass and energy balances, ideal gasses, chemical reactions, steady state and transient processes. Not open to students with credit in MATE 380. 4 lectures.

MATE 310. Noncrystalline Material Systems. 4 units
Term Typically Offered: SP
Prerequisite: MATE 210; MATE 340.
Design and synthesis of noncrystalline material systems. Synthesis, processing techniques, properties and fabrication methods of organic and inorganic polymeric materials. 3 lectures, 1 laboratory.

MATE 320. Materials Selection for the Life Cycle. 4 units
Term Typically Offered: W
Prerequisite: MATE 210.
Materials selection for sustainable product design. Use of material selection software and techniques to solve design problems with multiple objectives and constraints. Focus on Triple Bottom Line design including functionality, economic viability, and sustainability. Principles and tools for weighted property optimization, production cost modeling, and life cycle analysis introduced through project-based learning mode. Not open to students with credit in MATE 222. 4 lectures.

MATE 325. Transport Phenomena I. 1 unit
Term Typically Offered: F
Prerequisite: PHYS 132 and MATH 141.
Directed group laboratory study of energy transport. Focus on conduction and convection. 1 laboratory.

MATE 326. Transport Phenomena II. 1 unit
Term Typically Offered: W
Prerequisite: MATH 141 and ME 211.
Directed group laboratory study of fluid static and dynamic properties and behavior. Focus on non-compressible conditions. 1 laboratory.

MATE 327. Transport Phenomena III. 1 unit
Term Typically Offered: SP
Prerequisite: CHEM 124 and PHYS 133.
Introduction to radiative heat transfer and the material properties that control it. 1 laboratory.

MATE 340. Electronic Materials Systems. 4 units
Term Typically Offered: F
Prerequisite: MATE 210 and PHYS 133.
Design of electronic materials systems utilizing the basic concepts in electron theory of solids, electrical properties and conduction in materials, magnetic phenomena and optical properties in materials. 3 lectures, 1 laboratory.
MATE 350. Structural Materials Systems. 4 units  
Term Typically Offered: SP  
Prerequisite: MATE 210. Corequisite: CE 204.  
Design of structural materials systems. Topics include stress, strain,  
elasticity, anelasticity, plasticity, fracture and fatigue. 3 lectures, 1  
laboratory.

MATE 359. Living in a Material World. 4 units  
GE Area B7; GE Area F  
Term Typically Offered: F,W,SP,SU  
Prerequisite: Junior standing; completion of GE Area A with grades of C-  
or better; and completion of one course in GE Area B1 with a grade of C-  
or better.  
Evolution of materials (ceramics, metals, polymers, composites,  
semiconductors) in the context of history. Traces the link between  
historical and technological developments enabled by materials from the  
Stone Age to the Electronic Age. 4 lectures. Crosslisted as HIST/MATE  
359. Fulfills GE Area B7 or GE Area F.

MATE 360. Metallurgical Materials Systems. 4 units  
Term Typically Offered: SP  
Prerequisite: MATE 235.  
Physical metallurgy of engineering alloys including ferrous (steel) and  
nonferrous (aluminum, copper) systems. Connection to phase diagrams,  
microstructural development and phase transformations, physical and  
mechanical properties, precipitation hardening, cold work and annealing  
treated in detail. Laboratory focuses on microstructure development in  
steels and aluminum alloy casting. 3 lectures, 1 laboratory.

MATE 370. Kinetics of Materials and Process Design. 4 units  
Term Typically Offered: F  
Prerequisite: MATE 280 or MATE 380.  
Design of processes for engineering materials. Topics include kinetics  
in materials: solid-state diffusion (steady-state and non-steady-state),  
nucleation and growth kinetics, solid state phase transformations. 3  
lectures, 1 laboratory.

MATE 380. Thermodynamics and Physical Chemistry. 4 units  
Term Typically Offered: W  
Prerequisite: CHEM 125, PHYS 133, MATH 143, MATE 210 and MATE 215;  
Materials Engineering students only.  
Thermodynamics concepts related to materials engineering systems and  
processes: process flowsheets, mass and energy balances, Ellingham  
diagrams. Physical chemistry concepts related to materials engineering:  
ideal gases, systems and surroundings, first through third laws of  
thermodynamics, phase equilibria, chemical reactions. 4 lectures.

MATE 400. Special Problems for Advanced Undergraduates. 1-4 units  
Term Typically Offered: F,W,SP,SU  
Prerequisite: Consent of department head.  
Individual investigation, research, studies, or surveys of selected  
problems. Total credit limited to 8 units, with a maximum of 4 units per  
quarter.

MATE 401. Materials Characterization Techniques. 4 units  
Term Typically Offered: F, W, SP  
Prerequisite: MATE 210 and MATE 215.  
Hands-on experience with materials characterization instruments,  
such as scanning electron microscopy (SEM), light optical microscopy,  
x-ray diffraction (XRD), and atomic force microscopy (AFM). Open-  
ended projects to develop expertise with trouble-shooting ability, and  
the process of materials characterization and analysis 2 lectures, 2  
laboratories.

MATE 402. Materials Characterization Theory. 4 units  
Term Typically Offered: F, W, SP  
Prerequisite: MATE 210. Recommended: MATE 401.  
Fundamentals of materials characterization methods and thin-film  
microanalytical techniques, including optical techniques, electron  
microscopy, X-ray techniques, and ion beam techniques. Selection of  
surface analysis techniques. 4 lectures. Formerly MATE 510.

MATE 410. Nanoscale Engineering. 3 units  
Term Typically Offered: TBD  
Prerequisite: CHEM 125, PHYS 133 and MATE 210.  
Theory and practice of continuum-scale computational methods applied  
to engineering materials. Finite element modeling to predict mechanical,  
thermal, and damage behavior. Micro-structural development and heat  
treatments modeled using thermodynamic principles. Micro-scale  
materials modeling of plasticity and phase transformations. 4 lectures.

MATE 420. Biopolymers and Bionanocomposites. 4 units  
Term Typically Offered: W  
Prerequisite: MATE 310 or CHEM 444 or CHEM 544.  
Exploration of the synthesis, processing, properties, and performance of  
biologically derived polymers. Examination of nano-scale reinforcements  
and their use to enhance performance of biopolymers. Emphasis on  
reading and interpreting contemporary scientific literature. 4 lectures.

MATE 422. Ceramics and Glasses. 4 units  
Term Typically Offered: W  
Prerequisite: MATE 210.  
Development, utilization, and control of properties in ceramic materials  
(inorganic-nonmetallic solids). Emphasis on application on processing to  
achieve structure and properties. Structure of crystalline ceramics and of  
glasses. Mechanical, thermal, optical, magnetic, and electrical properties.  
Application of ceramics in technology. Physical chemistry of ceramics. 4  
lectures. Formerly MATE 522.

</table>

Legend: SP = Spring, W = Winter, F = Fall, TBD = To Be Determined
MATE 471. Selected Advanced Laboratory. 1-4 units
Term Typically Offered: TBD
Prerequisite: Consent of instructor.

Directed group laboratory study of selected topics for advanced students. Open to undergraduate and graduate students. The Class Schedule will list topic selected. Total credit limited to 8 units. 1 to 4 laboratories.

MATE 480. Composite Materials Systems. 4 units
Term Typically Offered: F
Prerequisite: MATE 350.

Properties, design and applications of composite material systems, concentrating on polymer-matrix, ceramic-fiber composites. Materials (matrices, fibers), mechanical behavior and properties, and manufacturing methods treated in detail. Laboratory practice concentrates on the mechanical testing of fiber-reinforced composite materials. 3 lectures, 1 laboratory. Formerly MATE 330.

MATE 482. Senior Project I. 1 unit
Term Typically Offered: F
Prerequisite: Senior standing; and Materials Engineering major.

Foundations of senior project design. Completion of the preliminary stages of selecting a senior project, designing experiments, evaluating realistic constraints, conducting initial experiments, and managing a project timeline. 1 laboratory.

MATE 483. Senior Project II. 2 units
Term Typically Offered: W
Prerequisite: MATE 482.

Continuation of senior project. Completion of a senior project experimental component under the guidance of a faculty supervisor. Research methodology, experimental design, experimental work and data analysis. 2 laboratories.

MATE 484. Senior Project III. 2 units
Term Typically Offered: SP
Prerequisite: MATE 483.

Continuation of MATE 483. Completion of a senior project data analysis and communication under the guidance of a faculty supervisor. Mathematical modeling and technical communication. 2 laboratories.

MATE 485. Materials and the Environment. 4 units
Term Typically Offered: TBD
Prerequisite: MATE 210.

MATE 490. Solidification and Densification. 4 units
Term Typically Offered: W
Prerequisite: MATE 210.

MATE 495. Cooperative Education Experience. 12 units
CR/NC
Term Typically Offered: F,W,SP
Prerequisite: Sophomore standing and consent of instructor.

Full-time work experience in business, industry, government, and other areas of student career interest. Positions are paid and usually require relocation and registration in course for two consecutive quarters. A more fully developed formal report and evaluation by work supervisor required. Credit/No Credit grading only. No major credit allowed; total credit limited to 24 units.

MATE 500. Individual Study. 1-4 units
Term Typically Offered: F,W,SP
Prerequisite: Consent of department head, graduate advisor, or supervising faculty member.

Advanced study planned and completed under the direction of a member of department faculty. Open only to graduate students who have demonstrated ability to do independent work. Enrollment by petition. Total credit limited to 12 units.

MATE 530. Biomaterials. 4 units
Term Typically Offered: W
Prerequisite: BIO 161, or BIO 213 and BMED/BRAE 213; MATE 210 and graduate standing or consent of instructor.

Structure-function relationships for materials in contact with biological systems. Interactions of materials implanted in the body. Histological and hematological considerations including foreign body responses, inflammation, carcinogenicity, thrombosis, hemolysis, immunogenic and toxic properties. Microbial interaction with material surfaces, degradation. 4 lectures. Crosslisted as BMED/MATE 530.

MATE 550. Micro Systems. 4 units
Term Typically Offered: F,W,SP
Prerequisite: Graduate standing.

Fundamentals of intelligent systems employing sensors, actuators and intelligent controls. Impact on material properties as devices shrink in the micrometer realm. Applications toward exploring nanotechnology. 4 lectures.

MATE 570. Selected Advanced Topics. 1-4 units
Term Typically Offered: TBD
Prerequisite: Graduate standing or consent of instructor.

Directed group study of selected topics for graduate students. Open to undergraduate and graduate students. The Class Schedule will list topic selected. Total credit limited to 8 units. 1 to 4 laboratories.
MATE 571. Selected Advanced Laboratory. 1-4 units
Term Typically Offered: TBD
Prerequisite: Senior or graduate standing or consent of instructor.

Directed group laboratory study of selected topics for advanced students. The Class Schedule will list topic selected. Total credit limited to 8 units. 1 to 4 laboratories.

MATE 599. Design Project (Thesis). 2-5 units
Term Typically Offered: F,W,S,SP,SU
Prerequisite: Graduate standing.

Each individual or group will be assigned a project for solution under faculty supervision as a requirement for the master's degree, culminating in a written report/thesis.
